Profile

Software engineer with 6 years of experience in web development, database and infrastructure administration.

- Good at analyzing tasks and designing solutions for them.
- Passionately advocating: Agile culture by spirit, Martin Fowler's attitude to refactoring, DevOps.
- Worked in the following spheres: Healthcare, FinTech, Media, Translation & Localisation.

Work experience

Team lead (Senior backend engineer)

Medicalib

May 2023 - present

Gdańsk, Poland

Project: Medicalib - an online platform in France that connects patients with healthcare professionals for home care services.

Tech stack: NodeJS (Typescript), Bunch of AWS serverless services: (Lambda, API Gateway, Step Function, DynamoDB, SQS, EventBridge, WAF, etc.), Elasticsearch, DataDog, Cloudflare, Terraform, Vue, Nuxt

Team size: 1PM, 1 QA, 4 Devs

- Designed and implemented a Quotation Engine, a system that automates the generation of quotes and estimates for healthcare services, eliminating the need for healthcare professionals to hire personal accountants.
- Fostered a testing culture by implementing a testing framework and training staff, reducing story cycle time by 10-15%.
- Reorganized project structure to leverage a monorepo approach, speeding up CI/CD by 20% on average and improving developer velocity.
- Implemented techniques that reduced Cold Start time for Lambdas by up to 300% and response time by 50%, significantly enhancing user experience.
- Setup DDoS protection for all APIs.
- Identified and fixed long-standing issues, addressing root causes effectively.

Fullstack developer (85% BE)

EPAM

February 2022 - May 2023

Gdańsk, Poland

Project: Berliner-Zeitung.de - leading Berlin media with over 5 million unique monthly users.

Tech stack: NodeJS (Typescript), Express, AWS App Mesh + ECS, CloudWatch, MongoDB (DocumentDB), Kafka, ReactJS (NextJS), Terraform

Team size: 1 DM, 4 QA, 1 BA, 1 SA, 1 BE, 4 FE; ~ 5 people from customer side

- Developed and implemented a content deduplication algorithm, significantly reducing duplicate content.
- Created a generic WordPress importer, enabling new customers to use the platform without abandoning WordPress.
- Integrated Google Analytics, allowing for the provision of relevant "most read" articles.
- Built a framework for E2E testing using Playwright, facilitating maintainable end-to-end tests.
- Refactored code to enhance testability and covered it with unit tests, achieving 95% test coverage and significantly reducing bug detection time.
- Participated in architecture discussions and design with a Solution Architect, greatly enhancing my field knowledge.

Project: LSEG - failover recovery system.
Tech stack: NodeJS (Typescript), Serverless framework (AWS Lambda), AWS SQS, SNS, CloudWatch, MySQL (RDS Aurora), ReactJS
Team size: 1PM, 1 QA, 1 BA, 1 SA, 3 BE, 3 FE; other teams ~ 20 people

- Introduced and implemented strict typing into the project; It gave a possibility to write a more robust code.
- Refactored code to make it testable and covered it with unit-tests; As a result the maintainability of the code began to improve.
- Introduced a new approach to Agile-meetings; It began to involve the whole team in the discussion of current tickets, problems, etc.

Fullstack developer

Rigi.io
 July 2018 - February 2022 Minsk, Belarus / Gdańsk, Poland

Project: Rigi.io - software localization platform
Tech stack: NodeJS (Typescript), NestJS, Express, Angular, AngularJS, PostgreSQL, MongoDB, Redis, WebSockets, Elasticsearch, Digitalocean as a cloud provider
Team size: 1 PO, 4 BE + FE

- Implemented multi-tenancy architecture, allowing hosting 40+ customers on one server, significantly reducing maintenance costs.
- Optimized server performance, including SQL queries and API calls, decreasing execution time by 2 to 10 times for updated parts.
- Administered databases and developed a backup system, which proved to be crucial in several instances.
- Participated in customer meetings, leading to faster and more accurate implementation of requirements.
- Initiated and led the development of a new client and server using the latest technologies, eliminating deprecated software and speeding up development.
- Maintained both frontend and backend components, resolving issues quickly and efficiently.
- Administered Linux servers, simplifying server and client updates, and reducing human error.
- Developed a new UI/UX, giving the system a modern look and intuitive behavior.
